

Trace every subdivision line visible in the original plan with precise orange neon over the realistic aerial view: outer perimeter, full street network, islands, block contours, and all individual lot boundaries. Do not highlight only the perimeter. The whole parcel grid must glow in vivid orange neon with exact alignment, subtle bloom, premium architectural presentation style, and total fidelity to the original layout.

“full parcel grid illuminated, every lot line individually highlighted, exact overlay registration from original plan to realistic view.”

The neon lot lines should appear with energy flowing along the layout, as if a luminous current is drawing each line in real time, leaving behind an elegant progressive neon glow over the masterplan.
