VISÃO DE CIMA

Masterplan Overlay — Top View

AERIAL

GIS

NEON

PROMPT · COPY & PASTE

Overlay the architectural masterplan precisely onto the provided aerial photograph of untouched terrain, using exact scale, exact geographic alignment, and exact orientation. Render all roads, blocks, lots, central avenue, roundabouts, and building footprints as thin, clean, technical outline linework, with a soft neon green glow and very subtle cyan accents. Apply a controlled neon glow outline only around the plan lines, with low intensity, sharp edges, and architectural precision, avoiding bloom or blur. Introduce minimal vertical light pillars (thin, semi-transparent, soft neon green with cyan tint) only at key nodes such as:

main entrances
roundabouts
central avenue intersections
Light pillars must be:

perfectly vertical
subtle and low opacity
clearly grounded to the terrain surface
purely visual markers, not volumetric or architectural elements
Ensure all linework and light pillars are fully integrated with the terrain, strictly following slopes, elevation changes, and natural contours – no floating, no shadows, no extrusion. Add very subtle topographic contour lines, thinner and lighter than the main outlines, consistent with realistic elevation data. Keep forest vegetation, coastline, soil textures, and natural terrain completely visible, untouched and unmodified beneath the overlay. Preserve the original daylight colors, exposure, contrast, saturation, and atmosphere of the aerial photograph exactly as provided. Maintain a strict orthographic, top-down view, with no camera movement, no perspective distortion, no tilt, no cropping, and no zoom. The final image must resemble a high-end professional architectural and urban planning visualization, combining GIS precision + architectural masterplan + subtle neon graphic language, suitable for luxury real estate, urban development, and investor presentation.

NEGATIVE PROMPT (OBRIGATÓRIO)

No perspective view, no isometric view, no 3D buildings, no volumetric architecture.
No heavy glow, no bloom, no lens flare.
No shadows from lines or light pillars.
No terrain modification, no smoothing, no stylization of vegetation.
No color grading, no lighting change, no exposure change.
No floating elements, no misalignment, no scale distortion, no warping.
No text, no labels, no icons, no symbols.

VISÃO DO HORIZONTE

Horizon Perspective — Neon Orange

HORIZON

LOT LINES

NIGHT

PROMPT · COPY & PASTE

Overlay the exact original lot layout over the real terrain, perfectly aligned and undistorted. Preserve all original lines, proportions and geometry of the subdivision plan. Add a subtle neon orange glow outline following precisely the lot boundaries, with soft vertical light pillars rising from the perimeter. Futuristic yet realistic architectural visualization, premium real estate style, cinematic lighting, night blue environment, high contrast, smooth glow, no changes to lot information, no text added, ultra clean, professional visualization.

ÂNGULO DRONE

Diagonal Aerial — Coastal Estate

DRONE

COASTAL

CINEMATIC

PROMPT · COPY & PASTE

```
{ "prompt": "A wide-angle, high-altitude aerial drone photograph of a luxurious coastal estate at a diagonal oblique angle. The view shows a large beachfront property with a main villa featuring solar panels, multiple blue swimming pools with lounge chairs and white umbrellas, and two tennis courts (one green, one clay red). The landscaping is dense and diverse, featuring succulents, palm trees, and green shrubs interspersed with sandy paths and natural dunes. To the right, a wide stretch of golden sand beach meets a clear turquoise ocean with gentle white waves breaking. The perspective is pulled back significantly from the property to show the scale of the terrain and the coastline. Bright, cinematic natural sunlight." }, "thought": "The user wants a more zoomed-out, aerial drone image of the terrain shown in the uploaded image, but from a diagonal perspective rather than a top-down one. I will generate an image that maintains the key features (beach, tennis courts, pool, solar-paneled building, lush vegetation) but from a higher, more angled viewpoint. format 9x16" }
```

TEXTO FONTE BRANCA 3D

3D White Solid Text — Architectural Placement

TEXT

3D

REALISTIC

PROMPT · COPY & PASTE

Ultra-realistic architectural visualization.

Insert a three-dimensional white solid text into the scene, physically placed on the ground (or attached to the facade of the house), respecting real-world perspective and vanishing points.

The text must look like a solid white box structure, with clean matte finish, realistic thickness (minimum 20cm depth), subtle bevel edges, and physically accurate scale proportional to the environment.

TEXTO 3D NEON

Neon 3D Text — Cinematic Realism

NEON

TEXT

PBR

PROMPT · COPY & PASTE

Apply natural daylight reflections and soft global illumination.
Generate realistic ground contact shadows, ambient occlusion between letters and terrain, and slight dirt/light bounce from the grass or soil to enhance realism.

The letters must interact with the terrain (slightly embedded if on grass or soil).
Camera depth of field consistent with the original scene.
Keep cinematic realism, no floating effect, no glow, no artificial outlines.

Hyper-detailed, high-resolution, architectural photography style, natural colors, physically based rendering.

PROMPT DETALHAMENTO

BIM/MEP — Four Model Comparison

BIM

MEP

TECHNICAL

PROMPT · COPY & PASTE

Ultra-clean wide 3D architectural visualization showing four perfectly aligned versions of the same two-story residential house, displayed side by side in a single horizontal composition. All four versions must be rendered from the exact same left-angled diagonal camera view, with identical perspective, camera height, focal length, scale, proportions, and framing, ensuring precise visual comparison.

Version 01 - Architectural Massing: SketchUp-style architectural model with flat solid colors, no textures, sharp edges, clean faces, simplified geometry, representing the architectural form only.

Version 02 - Structural Model: Structural system visualization showing beams, columns, slabs, and structural core, rendered in a semi-transparent technical style, clearly revealing load-bearing elements.

Version 03 - Electrical Model (MEP - Electrical): Electrical systems displayed over a translucent architectural volume, including conduits, wiring routes, lighting fixtures, panels, and circuits, highlighted in clear, distinct technical colors.

Version 04 - Plumbing Model (MEP - Plumbing): Plumbing systems displayed over a translucent architectural volume, showing water supply lines, drainage pipes, sewage systems, and vertical stacks, using contrasting technical colors for easy differentiation.

Visual Style & Environment: Clean BIM / MEP technical visualization style, soft neutral ambient lighting, minimal or no shadows, no dramatic contrast. Background must be pure white or very light gray, studio-like, distraction-free.

Annotations & Documentation (Portuguese): Add clear Portuguese technical annotations using CAD-style callouts, including: - Dimensions - Floor level markers - Section indicators - System labels and titles

All annotations must use thin dark technical lines, organized, aligned, readable, professional, and non-overlapping, resembling architectural and engineering construction documentation.

No people, no furniture, no landscaping, no sky, no artistic effects. Pure technical clarity.

MAPA SOLAR

Solar Path Diagram — Isometric Clay

- SOLAR
- ISOMETRIC
- DIAGRAM

PROMPT · COPY & PASTE

"Isometric 3D architectural white model of [INSIRA A DESCRIÇÃO DA SUA CASA AQUI], minimalist clay render style. The image features a technical solar path diagram with golden yellow arcs showing the sun's trajectory and position at different times of day over the building. A compass rose is visible on the ground. Clean white background, soft studio lighting, high resolution, architectural visualization."

PROMPT NEOM DETALHAMENTO

Holographic Blueprint — Futuristic Visualization

HOLOGRAPHIC

NEON

SCI-FI

■ PROMPT · COPY & PASTE

Transforme o moderno em uma visualização futurista de planta arquitetônica holográfica. Preservar uma estrutura exata, conforme as proporções, o ângulo da câmera, o paisagismo da casa original. Converta toda a arquitetura em uma estrutura de arame brilhante com contornos de neon branco e laranja, superfícies translúcidas e um forte brilho holográfico.

Adicione balões de texto quadrados flutuantes acima da casa, cada círculo contendo uma imagem realista do interior de diferentes cômodos, como sala de estar, cozinha, quarto e banheiro. Os círculos devem ser perfeitamente redondos, com bordas de néon laranja-esbranquiçadas estendidas e uma luz interna suave. Conecte cada círculo à área correspondente da casa usando linhas técnicas pontilhadas finas.

Inclui elementos técnicos sutis de interface do usuário, como medidas, anotações esquemáticas, tracejadas e sobreposições de interface. Ambiente noturno com fundo azul escuro, forte contraste, visualização arquitetônica cinematográfica de ficção científica, ultradetalhado, efeito de brilho excessivo, estilo de apresentação de alta tecnologia.

MOODBOARD ARQUITETÔNICO

Editorial Collage — B&W Drawing + Cutouts

EDITORIAL

COLLAGE

PRINT

PROMPT · COPY & PASTE

Create a high-end architectural editorial collage mood board.

Use only the provided black-and-white technical architectural drawing of the double-height living room as the base layer. The technical drawing must remain 100% intact and completely unchanged, with all original linework, dimensions, symbols, notes, and annotations fully visible, unobstructed, and readable at all times.

Using the provided realistic interior image strictly as visual reference only, carefully extract individual elements and present them as independent, ultra-realistic cut-outs, including but not limited to: - Sofa - Armchairs - Tables - Rugs - Pendant light - Decorative objects - Furniture pieces - Surface and material finishes

■ Absolute Rules (Non-Negotiable):

- * No cut-out element may remain in its original position relative to the reference image.
- * All extracted elements must be rescaled (reduced in size) and relocated to new positions different from their original placement.
- * The final composition must not resemble a realistic interior scene.
- * The result must read clearly as an architectural collage / editorial mood board, not as a rendered environment.

Composition & Layout:

Distribute the cut-out elements across the entire canvas, partially overlapping the technical drawing while preserving its legibility. Adopt a floating editorial layout, with intentional spacing, layered hierarchy, and visual rhythm typical of contemporary architectural publications.

Materials & Swatches:

Overlay circular material and finish swatches, directly sampled from the realistic reference image, including: - Herringbone wood flooring - Natural stone surfaces - Neutral textiles - Metallic finishes

Swatches should float above the composition and visually connect to the collage through scale, proximity, and subtle layering.

Lighting & Depth:

Apply: - Subtle soft shadows - Controlled layered depth - Neutral studio lighting
No dramatic lighting, no hard contrast, no directional sunlight.

Visual Style:

High-end contemporary architectural editorial aesthetic. Neutral beige and warm neutral palette, refined and minimal. Ultra-realistic textures on all cut-out elements. Clean composition, high resolution, print-ready quality. No people, no added text, no graphic effects beyond shadows and layering. Pure architectural editorial collage language.

LIFESTYLE LUXO — PISCINA

Macro Lifestyle — Infinity Pool at Sunset

LIFESTYLE

ULTRA-REAL

EDITORIAL

PROMPT · COPY & PASTE

Ultra-realistic lifestyle photograph of a woman immersed in a luxury infinity pool at sunset, vertical composition (9:16). Natural human skin rendered with extreme realism, fully preserved texture and micro-details. Visible skin pores on shoulders, collarbone and face, subtle natural oil sheen, fine vellus body hair occasionally catching the light, realistic water refraction on submerged skin areas.

The subject is calmly leaning against the pool edge, holding a transparent wine glass with rosé wine. Natural hand skin with fine lines and realistic knuckle texture, no smoothing. Facial skin shows authentic texture: visible pores, subtle micro-lines, natural tonal variations, no makeup enhancement, no beauty filter, no retouching. Wet hair with individual strands clearly defined, natural clumping from water, realistic highlights and shadow separation. Natural eyelashes, authentic eyelid skin texture, relaxed facial expression. No artificial plastic skin. Pool water rendered with physically accurate reflections, refractions, light caustics, soft ripples around the body, realistic interaction between water and skin surface tension. No floating artifacts, no distortion errors.

Background: modern luxury residence architecture softly out of focus, palm trees and landscaped garden with realistic bokeh falloff. City skyline subtly visible in the distance, softened by atmospheric perspective. Golden hour sunset lighting with warm highlights and cool ambient shadows, cinematic color contrast, natural skin tones preserved.

Lighting is fully natural: soft sunset key light with gentle rim light on shoulders and hair, diffuse fill from sky and water reflections. No harsh artificial lighting, no studio look.

Lens and capture characteristics: Shot on a full-frame camera, medium telephoto lens (85-100mm equivalent), shallow depth of field, sharp focus on the subject's face and upper torso with smooth natural falloff to background. High dynamic range, accurate color science, ultra-high resolution.

Photorealistic, editorial luxury lifestyle photography. Medical-grade skin realism, authentic imperfections preserved. No stylization, no CGI look, no AI artifacts, no smoothing, no retouching.

LINHAS TERRENO KLING

Neon Lines Drawing — Terrain Animation

ANIMATION

KLING

NEON LINES

PROMPT · COPY & PASTE

Start with a completely static, true top-down (nadir) aerial view of pristine, untouched forest terrain. The camera is fully locked: no pan, no tilt, no zoom, no rotation, no parallax, no stabilization movement. From the exact center of the frame, ultra-thin, clean, controlled neon linework begins to draw itself precisely over the land surface, perfectly aligned to the terrain geometry and natural features. First, the main road structure and central axis appear. Then secondary streets emerge, followed by urban blocks, lot subdivisions, and building footprints. All linework is architectural, technical, precise, and perfectly proportional. Neon color system: - Soft neon green highlights designated green and preservation areas - Pure white neon defines buildings, streets, blocks, and lot boundaries - Subtle, thin topographic contour lines fade in organically over the terrain. Glow behavior: - Clean, low-intensity, slightly translucent glow - Sharp edges, no bloom overflow, no light bleeding - Neon remains subtle, elegant, and premium. The natural terrain remains fully visible at all times: - No terrain deformation - No morphing - No texture replacement - No elevation changes. The final frame is fully stable and static, showing the complete architectural masterplan projected clearly over the real terrain, precise, harmonious, and realistic, with a high-end cinematic architectural visualization style.

ZOOM IN NO TRATORISTA

Cinematic Push-In — Construction Worker

VIDEO

CINEMATIC

CONSTRUCTION

PROMPT · COPY & PASTE

A single continuous cinematic shot starting with a wide view and ending in a close-up.

The scene opens with a wide cinematic shot of a large earthmoving and land grading site. The terrain is partially leveled, with clear soil textures, grading lines and construction marks. A tractor is operating in the middle of the land, moving slowly forward. Natural daylight, realistic colors, calm atmosphere, subtle dust lifted by the machine, documentary realism.

Camera movement: The camera starts far and wide, positioned slightly above ground level. It performs a smooth, steady forward push toward the tractor, slowly descending in height as it moves closer. Motion is fluid, cinematic, and perfectly stabilized.

As the camera approaches the tractor, the framing naturally transitions from a wide shot into a medium shot without any cut. The environment remains visible while focus gradually shifts to the machine and the operator.

Near the end of the shot, the camera reaches the tractor cabin, passing close to the exterior glass. The movement continues seamlessly into a close-up of the tractor driver inside the cabin.

Final frame shows an intimate close-up of the driver's face and hands on the controls. Focused expression, natural skin tones, realistic work clothing. Soft reflections on the cabin glass, floating dust particles highlighted by sunlight, shallow depth of field isolating the subject.

Visual style: Ultra-realistic, cinematic lighting, professional construction documentary look, natural physics, smooth camera motion, no cuts, no text, no logos, no CGI appearance.

ZOOM IN NO ENCANADOR

Aerial to Close-Up — Plumber at Work

VIDEO

AERIAL

PLUMBING

PROMPT · COPY & PASTE

A single continuous cinematic shot with smooth camera movement from aerial to close-up.

The scene opens with a high-altitude aerial view of a construction site with land development in progress. The terrain is partially leveled, showing clear earth tones, grading lines, pathways and infrastructure markings. Natural daylight, realistic colors, clean and professional construction environment.

Camera movement: The camera begins high above the terrain in a top-down aerial perspective. It slowly moves forward while descending in a smooth, controlled motion. As the camera lowers, the framing transitions from a wide aerial shot to a medium overhead view, revealing plumbing trenches and exposed piping integrated into the land. As the camera continues descending, it subtly tilts forward, aligning the horizon and guiding attention toward a worker on the ground.

The shot naturally flows into a medium shot of a plumber working on installed pipes. The plumber is kneeling or slightly bent, focused on connecting or adjusting plumbing components. Realistic tools, pipes, and fittings visible. Natural workwear, gloves, and safety details.

Final framing: The camera performs a gentle final push-in to a close-up of the plumber's hands and face while working. Focused expression, detailed hand movement, realistic textures on tools and materials. Shallow depth of field isolates the plumber from the background. Soft sunlight highlights dust particles and surface details.

Visual style: Ultra-realistic, cinematic lighting, professional construction documentary style, natural physics, smooth stabilized camera motion, no cuts, no text, no logos, no CGI look.

BASE DO TIMELAPSE

Static Camera — Construction Time-Lapse

TIMELAPSE STATIC BASE

PROMPT · COPY & PASTE

Static camera time-lapse construction site,

ZOOM NA CASA

Aerial to Facade — Residential Reveal

VIDEO

AERIAL

RESIDENTIAL

PROMPT · COPY & PASTE

A single continuous cinematic shot with smooth, uninterrupted camera movement from aerial view to final architectural reveal.

The scene opens with a high-altitude aerial view of a residential development site. The terrain is leveled and organized, with visible earth textures, paths and construction alignment. Natural daylight, realistic colors, clean and professional environment.

Camera movement: The camera starts in a top-down aerial perspective, perfectly stable. It slowly moves forward while descending in a smooth, controlled motion. As the camera lowers, it gently tilts forward, transitioning from a vertical top-down view to an angled cinematic perspective. Subtle parallax reveals the depth of the landscape. As the camera continues descending, the outline of a completed house becomes visible within the terrain. Construction details gradually give way to finished landscaping and architectural elements.

Scene evolution: The surroundings transition naturally into a completed residential environment. Grass, pathways and curated landscaping appear refined and realistic. The house comes fully into view as the camera aligns with eye-level height.

Final framing: The camera finishes with a slow, elegant push-in toward the front facade of the house. Architectural details such as materials, textures, windows, entrance door and facade geometry are clearly defined. Soft cinematic lighting enhances depth and realism. Clean, premium residential aesthetic.

Visual style: Ultra-realistic, cinematic lighting, high-end real estate presentation, natural physics, smooth stabilized camera motion, no cuts, no text, no logos, no CGI appearance.

TRANSIÇÃO MOODBOARD

Orbiting Elements — Living Room Assembly

VIDEO

MOODBOARD

TRANSITION

PROMPT · COPY & PASTE

Static camera, wide and well-balanced composition.
The camera remains fully locked with no pan, tilt, zoom, or rotation.

Abstract mood board elements related to interior design orbit gracefully within the space,
moving in smooth, controlled trajectories.
Their motion follows deliberate rhythms, gently accelerating and decelerating in a cinematic, harmonic flow.

One by one, the elements begin to slow down.
Each element subtly snaps into perfect alignment,
settling precisely into its final physical position in the room.

Materials, furniture, textures, and decorative elements progressively resolve into a cohesive, realistic
environment.
The transformation is calm, elegant, and intentional, never abrupt or chaotic.

Final state:
A complete, serene, high-end living room interior,
with refined lighting, realistic materials, balanced composition,
and a premium architectural visualization aesthetic.

Motion ceases completely in the final frame,
leaving a stable, quiet, and visually harmonious scene.

ZOOM PARA A QUADRA DE TÊNIS

Aerial to Lifestyle — Tennis Court Reveal

VIDEO

LIFESTYLE

TENNIS

PROMPT · COPY & PASTE

A single continuous cinematic shot with smooth, uninterrupted camera movement from aerial view to final lifestyle action.

The scene opens with a high-altitude aerial view of a developed residential area. The terrain is clearly defined, with organized pathways, landscaping and urban planning visible from above. Natural daylight, realistic colors, clean and upscale environment.

Camera movement:

The camera begins in a stable, top-down aerial perspective. It slowly moves forward while descending in a smooth, controlled motion. As it lowers, the camera subtly tilts forward, transitioning from a vertical aerial view into a cinematic angled perspective, revealing depth and spatial continuity across the terrain.

As the camera continues its descent, a modern tennis court emerges naturally within the landscape. The court is well-maintained, with clean lines, realistic surface texture and surrounding greenery.

Scene evolution:

The camera glides closer, transitioning from a wide view of the court to a medium shot. A woman is playing tennis, moving naturally across the court. Her movements are fluid and athletic, realistic sports posture, focused expression. Natural sportswear, realistic motion physics, no exaggerated action.

Final framing:

The camera finishes with a smooth, elegant push-in toward the player as she prepares to hit the ball. The final shot frames her in a dynamic yet cinematic composition, shallow depth of field subtly separating subject from background. Soft sunlight enhances realism and atmosphere.

Visual style:

Ultra-realistic, cinematic lighting, premium residential lifestyle look, natural physics, smooth stabilized camera motion, no cuts, no text, no logos, no CGI appearance.

DETALHAMENTO — CÂMERA ARC

Camera Arc — BIM Model Reveal

VIDEO

ARC

BIM REVEAL

PROMPT · COPY & PASTE

The camera executes a smooth, controlled rightward arc, maintaining constant speed and stabilization. As the movement unfolds, the building's physical materials gradually dissolve into precise wireframes and exposed structural layers, revealing its architectural logic without abrupt transitions.

In perfect synchronization with the camera motion, four technical architectural models disengage from the façade one after another. Each model rotates outward with subtle mechanical precision, preserving scale, proportions and alignment.

As the camera completes its arc, the four models settle into a clean vertical stack, perfectly spaced and aligned in depth and height, forming a clear and readable architectural sequence. Motion remains fluid and grounded in realistic physics, with a refined, high-end visualization style.
